

Use case specification:

5 primary functional requirements

1. Login

Upon entering the site, a user can log into their account and access the provided content like albums, music and discussion forums

2. register

If a user doesn't already have an account, they can sign up. Users cannot access comments unless signed up or registered to use TalkTempo.

3. commenting

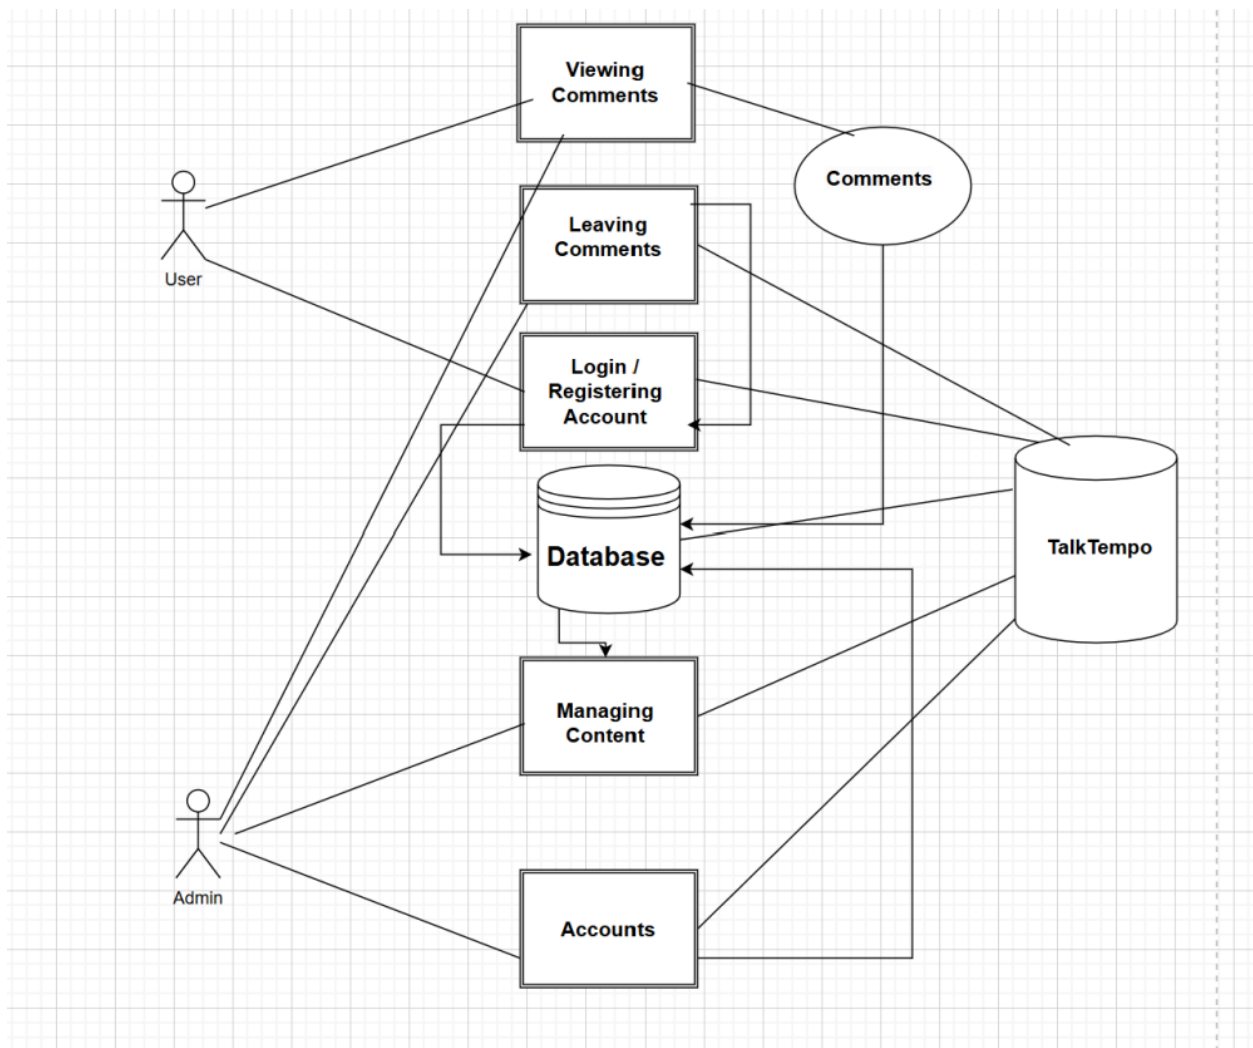

Users can leave comments under different albums/songs and discuss with each other what they thought of the said album.

4. viewing content

Users can use the site and view everything but cannot comment or interact with content unless signed up.

5. buying products.

Users can buy specific products on the site and must be registered with us to be able to purchase products.

Trello diary entry:

Diary Entry: 21/02/2025

People Present: Sena Raufi, Pixie Grogan, Ojal Rakwal

What each member has done since last week: pixie got started on the database and did a used case. SenaSdiagram. Sena added more pages, animations to the front oage

Roles to be taken: Ojal will be fixing and fine tuning php files while discussing with her classmates what needs to be changed. She is also responsible for todays documentation. Pixie is fixing her second diagram and working on the database. Sena is fixing the design elements on

changed. She is also responsible for today's documentation. Pixie is fixing her second diagram and working on the database. Sena is fixing the design elements on figma and fine tuning her html files.

Current Status of the project:
We have a lot of the front end aspect of the website done. Design is being discussed and finalised. A database has been made and we have a better understanding of things that we will be going forward with and what we will be discarding.

Decided upon after today's lab:
that the progress is good so far.

that the progress is good so far.
have to work on php and twig.
have to update newly outlined
database

What was achieved today and
during todays lab: lab3 finished
and submitted. learned about
scrum master. php set up
properly. better understanding
of website layout and deign.
website design finalised and
prototype made.

What was agreed with the
lecturer: make a uspeck table.
make it simple and
understandable. draw out urself
and draw physically for use case
diagram to make it
understandable for user so they
